SUMMARY

Full stack software engineer with 6+ years building scalable web applications end to end, from Vue.js and TypeScript front ends to Java Spring REST APIs, deployed on AWS in a distributed microservices environment. Proven record shipping production systems, driving a 62% page load improvement, and mentoring engineering teams. AWS Certified Developer Associate.

EXPERIENCE

Lumen Technologies | Software Engineer II (Promoted from Intern) | Texas, USA | Jun 2022 to Present

- Led full stack development of production microapps, building Vue.js and TypeScript front ends backed by Java Spring REST APIs deployed on AWS in a distributed microservices environment.
- Upgraded 3 Vue.js microapps from v2 to v3 within 3 months, delivering a 62% improvement in page load speed through component architecture refactoring and performance tuning.
- Designed and built REST APIs with the Java Spring Framework for real time data retrieval, supporting high volume operational workflows across cross functional engineering teams.
- Built self service operational dashboards on ServiceNow, enabling end to end workflow creation and user management that increased efficiency by 45%.
- Achieved 90% code coverage via Cypress end to end tests and 85% unit test coverage using Mocha and Sinon, supporting CI/CD pipelines and Agile delivery.
- Mentored junior engineers resulting in a 70% improvement in coding proficiency, reviewed pull requests on GitHub, and used Postman and Swagger to define and validate API contracts with backend teams.

Accenture | Application Development Analyst | Karnataka, India | Jul 2018 to Jul 2021

- Co led design and implementation of scalable REST APIs for batch data retrieval using .NET Framework and SQL Server, applying software design patterns for high volume data pipelines.
- Built backend transaction management systems with ASP.NET and C#, accelerating application performance by 30% and reducing latency across distributed components.
- Upgraded and optimized PL/SQL databases, achieving 60% efficiency gains in query performance and data processing reliability for daily batch applications.
- Automated end to end testing with Selenium WebDriver and Java, reducing testing time by 40%, and resolved 150+ production issues using Splunk log analysis.

Imedrix | Engineering Intern | Karnataka, India | Feb 2017 to Jun 2017

- Implemented a K means machine learning algorithm to classify 12 cardiac arrhythmias for a handheld ECG device, achieving 70% classification accuracy.
- Managed project timelines and task delegation, leading the team to a 95% on time completion rate.

EDUCATION

Computer Engineering | Master of Science

The University of Texas at Dallas

Aug 2021 to Apr 2023 | GPA: 3.67/4.0

Coursework: Advanced Algorithms, Distributed Systems, UI/UX Engineering, Cloud Computing

Electronics and Communications Engineering | Bachelor of Engineering

NMAM Institute of Technology

Jun 2014 to Jun 2018 | GPA: 3.56/4.0 (converted from 8.9/10)

Coursework: Data Structures, Object Oriented Design, Software Engineering, Web Technologies

SKILLS

Languages: TypeScript, JavaScript, Java, C#, Python, HTML, CSS

Frameworks: Vue.js (v2/v3), React, Angular, Node.js, Java Spring, .NET Core

Backend & APIs: REST APIs, GraphQL, Microservices, RabbitMQ

Cloud & DevOps: AWS (Certified, EKS, S3, CloudWatch), Azure, Docker, Jenkins, CI/CD, Git, GitHub, Google Cloud

Databases: MS SQL Server, MySQL, MongoDB, PL/SQL

Testing : Cypress, Selenium WebDriver, Mocha, Sinon, Playwright, Jest

Tools: Apigee, Apigee X, Postman, Swagger, Figma

Analytics: Adobe (Customer Journey Analytics), Datadog

Practices: Agile/Scrum, Distributed Systems, System Design

CERTIFICATIONS & AWARDS

AWS Certified Developer, Associate, Amazon Web Services (May 2021)
